ISTQB-certified test automation engineer with four years of experience building UI, API and E2E automation for web applications. Designs maintainable Selenium/JUnit frameworks on the Page Object Model, writes BDD scenarios with Cucumber, and runs suites inside CI/CD pipelines with Jira/Xray reporting. Comfortable owning test strategy and test infrastructure from scratch in Agile teams.

## TECHNICAL SKILLS

|            |                                                                                                                                                     |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| AUTOMATION | Selenium WebDriver · JUnit · TestNG · Appium · WebdriverIO · Cucumber (Gherkin) · Page Object Model · Data Driven Framework · Playwright (learning) |
| API & PERF | REST Assured · Postman · Swagger UI · JMeter                                                                                                        |
| LANGUAGES  | Java (OOP) · JavaScript · SQL / MySQL (JDBC) · HTML · CSS                                                                                           |
| CI/CD      | Jenkins · Git & GitHub · Maven · AWS                                                                                                                |

## PROFESSIONAL EXPERIENCE

Senior Software Test Automation Engineer

November 2024 – Present

Birtech Technology

Eskişehir, Turkey

- Built the company's UI test automation infrastructure from the ground up with Selenium WebDriver, JUnit and the Page Object Pattern, keeping the suite maintainable as coverage grew.
- Owns end-to-end coverage of an Angular-based web application spanning ~84 screens, with around 20 E2E scenarios running unattended overnight — regression work that previously took a week of manual testing now closes in a single night.
- Set up nightly execution on Jenkins and delivered results to stakeholders automatically through email, Slack and Telegram integrations, with defects opened in Jira.
- Established test management through Jira/Xray — traceable test cases, release test plans and test metrics reporting for stakeholders.
- Added API testing with REST Assured and performance testing with JMeter; defines the test strategy per project — what gets automated, what stays manual, how risk drives priority — and keeps the suite trustworthy by tracking and eliminating flaky tests.
- Runs an AI-assisted test process with Claude Code, directing scenario and test data generation, page object scaffolding, failure triage and integration with the surrounding toolchain — deciding what deserves coverage, reviewing every output and hardening it to the framework's standards, so automation delivers well beyond a conventional suite.

Software Test Automation Engineer

March 2023 – November 2024

PITON Technology

Eskisehir, Turkey

- Set up a reusable boilerplate automation infrastructure in a BDD Mocha framework with WebdriverIO, so new services could be onboarded into UI testing without rebuilding the setup; results reported through Allure.
- Wrote UI and API test suites covering every service whose backend was ready, with API cases derived from the Swagger contracts and executed on a daily schedule.
- Ran test management in YouTrack: organized test cases, linked them to automation, managed release test plans and customized reports; smoke and regression suites executed from Jenkins.

QA Test Automation Engineer

April 2022 – February 2023

Hynotes Inc. · therapy practice platform

California, United States

- Automated regression scenarios in a BDD Cucumber/Gherkin framework for a US-based product team, collaborating asynchronously in English across time zones and analyzing Cucumber reports with the developers.
- Managed test cases and release test plans with Jira Xray, working with cross-functional teams through Scrum and Kanban; tested the API layer with REST Assured, Postman and Swagger UI, plus SQL checks against the database.

## CERTIFICATES

ISTQB Foundation Level (CTFL), 2022 · Artificial Intelligence and Machine Learning, Marmara University (2026) · Test Automation University: API Testing With RestAssured, Cucumber With Java, JUnit 5
